

IN THE CLAIMS

1-3(canceled).

4(currently amended). The structure as claimed in Claim 2 [[1]] wherein the first spacer panel and the first panel are coplanar, the second spacer panel and second panel are coplanar and the third spacer panel and the third panel are coplanar.

5(currently amended). The structure as claimed in Claim 2 [[1]] wherein two of the first, second, third and fourth panels are side walls of the structure, one of the first, second, third and fourth panels is the front wall of the structure and one of the first, second, third and fourth panels is the rear wall of the structure.

6-8(canceled).

9(currently amended). A modular structure, comprising:

a top panel having four sides;

a first spacer panel connected generally perpendicular to a first side of the top panel;

a first panel pivotally connected to the first spacer panel;

a second spacer panel connected generally perpendicular to a second side of the top panel;

a second panel pivotally connected to the second spacer panel;

a third spacer panel connected generally perpendicular to a third side of the top panel;

a third panel pivotally connected to the third spacer panel; and

a fourth panel pivotally connected to a fourth side of the top panel.

wherein the first, second, third and fourth panels generally have a thickness T, the first spacer panel generally has a width T, the second spacer panel generally has a width 2 times T and ~~The structure as claimed in Claim 8 wherein the~~ third spacer panel generally has a width 3 times T.

10(currently amended). The structure as claimed in Claim 2 [[1]] wherein the second and third spacer panels are generally parallel and the first spacer panel is generally perpendicular to the second and third spacer panels.

11(original). The structure as claimed in Claim 10 wherein the second and third panels are side walls of the structure, the first panel is a rear wall of the structure and the fourth panel is a front wall of the structure.

12-13(canceled).

14(currently amended). The apparatus as claimed in Claim 16 [[13]] wherein the spacer panels are pivotally connected to the respective wall.

15(canceled).

16(currently amended). A structure apparatus, comprising:

a roof deck;

side walls connected to the roof deck;

a front wall connected to the roof deck and to the side walls;

a rear wall connected to the roof deck and the side walls;

a first elongated spacer panel connected between at least one of the side walls, the front wall and the rear wall;

a second elongated spacer panel connected between at least one of the side walls, the front wall and the rear wall; and

a third elongated spacer panel between at least one of the side walls, the front wall and the rear wall,

wherein the first spacer panel is wider than the second spacer panel and the second spacer panel is wider than the third spacer panel,
